

## Could genome engineering advance your research?

Do you lack a genetically altered mouse line that is fundamental to your research?

Nominations are now open for Genome Editing Mice for Medicine (GEMM) – a new community programme funded by the Medical Research Council from the MRC Harwell Institute.

GEMM will exploit the technical and logistical expertise developed at Harwell, together with recent advances in genome editing, to generate novel mouse lines. These are at no cost to the nominating scientist (apart from delivery costs).
